Letter of Recommendation

Site installation support during the installation of the crankshaft automation line at FORD Sollers Elabuga Russia 2014.

The services that EWAB required from STK was working alongside EWABs installation team during the installation of the EWAB crankshaft automation line. Work conducted was Electrical and Mechanical installation work.

I would like to point out that I would not hesitate to use the services of STK in future projects they proved to be hard working reliable and quick at learning the process of work being conducted, at any point there was a need for translation between English and Russian there was always a translator available to translate and get the message across.

The quality of STK work was always conducted in a professional manner and to a very high standard and there was never a need for rework.

I would like to thank STK for their help and support during the installation and look forward to working with them in future projects.

Wayne Leeke
Production Manager EWAB United Kingdom.
